Lab 2.1. In this lab, you are to make some simple changes to the LEX program provided [HERE](#) 

You need to test your code with the input from [HERE](#) 

GOAL: Reinforce LEX usage and the use of user defined variables.

Your task is to download the file, and add a new variable to count the lines of the input. ***Where-ever there is an error message*** in the LEX routine, you are to print out the line number with the error.

You will need to to do web searching (or search your friend) on how to identify a new line and increment your line counter.

Deliverables

A PDF file with

Your name, description of the problem

A summary of the changes you made

The listing of your code WITH ANY ADDITIONAL COMMENTS showing what changes you made

A print screen of how your code works with the test code
